

BIRDS of PREY

Birds of prey, or raptors, hunt and feed on other animals. Many species of birds may be considered partly or exclusively predatory. In ornithology, the term refers only to birds with certain features.

WHAT ARE THE KEY ACCESSORIES FOR A COOL RAPTOR?

Some of these birds rise in the morning to do their predatory wandering, but others are up all night, just waiting to scare the shit out of sleeping critters in their last moments! The ones that walk around in daylight are called "diurnal", them weird night creepers is called "nocturnal."

NIGHT STALKERS

Barn Owl (Strigidae)

These are medium to large owls with large heads and heart shaped faces. Of the 16 living species, only a few are well known. Creeps!

Typical Owl (Tytonidae)

Though they vary greatly in size, the "typical" owl has a big head, short tail and dem circles around the eyes. Also, ladies is bigger than the mens.

CHILLING FACTS

- Owls are not professors
- Those are not "ears"
- Owls are mostly feathers
- Owls are pretty cute

DAY WANDERERS

Eagle

'Merican hero. That's all that matters.

Buzzard

Eats flesh, gross. But has cool name.

Kite

Comes with a string on its butt.

Harrier

Runs from bar to bar with chalk.
